INSTRUCTIONS

INSTRUCTIONS:

Strap Buckles

If existing buckles are serviceable and of the same type as supplied in this kit, they may be reused. If existing buckles are broken, follow steps below for replacement.

1. Remove broken buckles from spa cover straps.

(Cut buckle with snips for removal if necessary).

2. Replace buckles. If your spa cover straps have closed loops, snip out a 1/8" section from strap buckle as shown to facilitate a slot for installation of replacement buckles, without the need for cutting and re-sewing the straps.

3. Carefully slide strap material through the cut slot.

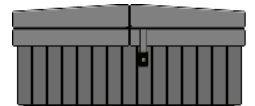

INSTRUCTIONS

Locks

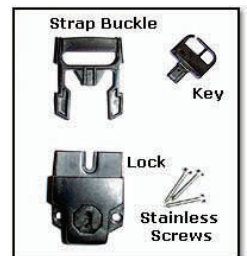

1. Position and center spa cover on spa.

2. Position lock bodies on spa sides in locations corresponding to the spa straps. Allow about 1/2" to 3/4" slack in straps for ease of latching and removal.

3. Attach lock bodies with three Phillips head screws each.

(In tile or concrete installations, use anchors or epoxy to secure screws).

Keep cover straps fastened when spa is not in use. For security, latches may be locked with supplied keys.
